

Installation Instructions:

1. Install the Database: Given you have already installed a mySQL database instance on your server, you may import the attached database file "mylea_beta.sql". This template includes all tables and data fields.
2. Configure the database settings: Open the file db.sql; Insert your server configuration in the first line: "\$con = mysql_connect("XXX","XXX","XXX");" The first parameter is the server connection (e.g., localhost), the second parameter is the database username, the third parameter is the database password.
3. Copy the file package to a folder in your server's root folder.

Configuration / Use:

1. You need to define manually (i.e., directly in the database a school I the schools table. This generates the unique school id. It is possible to generate any number of schools. For each school you have to define an administrator. Go to the people table and add a person with the role "3" (1 is teacher and 2 student).
2. Login to the system with the administrator account go to the configuration module and define teachers and make the other settings (this is explained I the manual for the configuration tool).
