

Installation Instructions:

1. Install the Database: Given you have already installed a MySQL database instance on your server, you may import the attached database file "leas_flowers.sql". This template includes all tables and data fields.
2. Configure the database settings: Open the file db.sql; Insert your server configuration in the first line: "\$con = mysql_connect("XXX","XXX","XXX");" The first parameter is the server connection (e.g., localhost), the second parameter is the database username, the third parameter is the database password.
3. Copy the file package to a folder in your server's root folder.

Configuration / Use:

1. You need to define the teachers and students in the people database. The entries are self-explanatory. Teachers have role 2 and students the role 1. With role 3 you may define an administrator.
2. The files include a link to external tests. You may or may not use this option. The test URL is now set to "*YOUR_URL*" as a placeholder. Replace this with your external test URL.
3. To change and adapt the flow app according your needs you need to change the source code accordingly. To change the flower graphics, alter the images in the subfolder "flower".
